

## **RISK ANALYSIS RESIDUE POLICY**

The various emergency situation including environmentally hazardous accident / incidents applicable to the unit's activities, products and services have been identified during the initial environmental review.

The review results show that the most significant emergency situation relate to the fire hazard in the Raw Material Godown and Finished goods Godown. Apart from this possibilities of fire also exist in other area like Power supply, Maintenance & Store.

Apart from the above a very low probability of accidents due to Electric shocks in the Power Supply, failure of lift etc. may also exist.

This plan give the details of the company's preparedness to deal with above emergency situation with specific emphasis from significant risk including actions required to mitigate the effect on environment.
